MORPHEUS Post-Procedure Information

1. Immediately after your treatment, the practitioner performing your treatment will apply an ointment. Do not cleanse the area for the first day of your treatment. For the first night, elevate the head on a pillow.

2. Beginning the day following your treatment, apply Biafine to the treated area 2 times per day for the first three days. It is important to keep the treated areas moist so healing occurs appropriately.

3. It is normal for your skin to be moderately red, swollen and slightly tender. Redness and swelling may last for several days and up to two weeks depending on your skin's response and treatment.

4. Do not pick, peel or scratch the treated areas. Any crusting or scabbing will slough/shed on its own when the new skin is ready for exposure.

5. Gently mist the treated areas with cool water or soak your face gently and lightly with a clean white washcloth as needed. Do not rub or wipe the cloth over the affected areas. You may add one teaspoon of white vinegar to the water to soothe any burning sensations. Reapply Biafine after each soak to keep the area moist.

6. On day three, you may begin cleaning the treated area with a gentle cleanser. Please do not use any scrubs or exfoliants.

7. On day four, if the skin is healing and not every sensitive, begin using a high factor sunscreen of SPF 30 or greater at all times when exposed to sunlight. This includes while driving. You may now begin using makeup.

8. You may return to your normal skin care routine on day five or when your physician instructs you to do so.

9. Your follow-up appointment will be made at the time of your treatment. If you have any questions or experience fever, chills, drainage, discharge or extreme discomfort, please contact our office immediately at 203-838-8844.
