Vein Treatment Post-Procedure Information

1. Some tender lumps may be felt under the skin following treatment which may subside by themselves or require aspiration with a needle. This is NOT a complication and is dealt with at the next scheduled visit.

2. Rarely, a sore might develop at an injection site. If such a sore does occur, it should be washed with soap and water and covered with a simple dressing, such as a Band Aid, until it scabs. If it occurs, it will leave a scar which is usually very small. Please do NOT apply any antibiotic ointments or salves.

3. Rarely, an allergic reaction might occur due to the medication, or to the bandages.

4. While the compression bandages are on, kneeling or squatting for more than thirty (30) seconds without straightening the knees should be avoided.

5. Brown discoloration (pigmentation) can develop in any of the treated areas. It usually fades in time but may be permanent.

6. New, or recurrent, varicose and/or 'spider' veins can develop at any future date. These can usually be treated without the need for further compression *provided that follow-up visits are kept as requested.*

7. Neither cosmetic nor symptomatic improvement is guaranteed.

PLEASE DO NOT APPLY ANY OINTMENTS, ANTIBIOTICS OR VITAMIN E

If you have any questions which are not answered above, please call our office at 203-838-8844.
Please call immediately if a problem is noticed and don't wait until late in the day to contact us.
